

SAMS case volumn outlier prediction

Tuesday, April 22, 2025 14:34

Pred: 2nd half of month
Take action
False positive

First alert day	Last alert day	goundtruth
-----------------	----------------	------------

Frequency/range	all month	2nd half of month	last-week
-----------------	-----------	-------------------	-----------

1 day
2 day
5 day
7 day
10 day

Email reporting each rule
In SAR holistic dashboard, it seem there is another

Grace comment (no more comment)-> implementation

SAMS: mockup take solution task breakdown; time range
Case decision log:
 AML 56
 BRM 53
 DD 50

Overview kpi(reflect last month's statistic data)

Rule Heat Map : 6months average. Monthly, or real-time. 这个月还没过完，就是0，只能看上一个月比较（不允许选择未完成的月；但有些metrics就要实时的）

Form change, monthly,
Various rules across domains:

Domain	Jurisdiction	
--------	--------------	--

Rolling average - 6months average(39.67)

Timerange, month to day, last month

To do :

- Query engine output ?
- Metrics definition in test env;
- generate summary based on data;
- change comparison ->next version

Detection management - rule 308 -- simulation
Run a simulation
Simulation results history
Benchmark

UI design

Casefile

Front end, input , output, interface, parameter, input, dependency on model side. Meeting -> how to do this. Add Tangbin ->backward timeline to be decided

Markdown , html, -- give to another agent, add two columns: do you need format columns?

Time 's up. Any comments/ (supplement/add/complement) 'Complement' and 'supplement' are used to show that something is added to another. However, 'complement' is something that is added in order to improve that particular thing, but 'supplement' indicates something extra and if it is removed, nothing will happen.
